Understanding Penal Practice Jul 05 2020 Criminological and penological scholarship has in recent years explored how and why institutions and systems of punishment change - and how and why these changes differ in different contexts. Important though these analyses are, this book focuses not so much on the changing nature of institutions and systems, but rather the changing nature of penal practice and practitioners Bringing together leading researchers from around the world, this collection unites studies that aim to describe and critically analyse penal practice with studies that investigate its effectiveness and prescribe its future development. Reversing penology's usual preoccupation with the prison, the book focuses mainly on penal practice in the community (i.e. on probation, parole, offender supervision and 'community corrections'). The first part of the book focuses on understanding practice and practitioners, exploring how changing social, cultural, political, and organisational contexts influence practice, and how training, development, professional socialisation and other factors influence practitioners. The second part is concerned with how practitioners can be best supported to develop the skills and approaches that seem most likely to generate positive impacts. It contains accounts of new practice models and approaches, as well as reports of research projects seeking both to discover and to encourage effective practices. This book explores internationally significant and cutting-edge theoretical and empirical work on the cultures, practices, roles and impacts of frontline practitioners in delivering penal sanctions. As such, it will be of interest to researchers in criminology, social work and social policy as well as correctional policy makers and those involved in community supervision.

Knowledge and Practice Nov 20 2021 Longstanding cultural heritages about the nature of knowledge continue to dominate Western education. Yet the ways of knowing represented through teaching and workplace practices, including assessment, and their relationship to views of learning, are often ignored in debates about learning. This book provides a rich collection of readings that challenge traditional understandings of knowledge and the view of mind that underpins them. It offers socioculturally informed alternatives and tools for innovating change and transforming practice that value different ways of knowing, embracing those that learners bring to educational and workplace settings. The book takes forward thinking about curriculum in a number of unique and important ways. It adopts a relational view of learning and knowledge, covers educational and workplace learning, and examines knowledge from a sociocultural perspective where learner identities are conceived as forms of competency or knowledge. It presents challenging ways of thinking about knowledge and learning and considers how to enact these in practice. Drawing from the international literature, this book will be essential reading for students of curriculum, learning and assessment in all sectors from primary to further and higher education. It is suitable as a core text for masters and taught doctorate programmes. It will also be of interest to a wide range of professionals involved with the processes of curriculum, learning and the practice of teaching and assessment. It will be relevant to those in work-based and professional education and training and informal educational settings, as well as traditional educational institutions at all levels. A unique collection in a field that is underrepresented, it will also be of interest to an academic audience.

Understanding and Researching Professional Practice Jan 23 2022 Understanding and researching professional practice is crucial both to enhancing the quality of professional learning and to improving professional education more generally. Yet professional practice remains something that is little known, theoretically and philosophically, despite a longstanding interest in what might be called the meta-field of professional practice, learning and education. The contributors to this book, drawn from fields such as education, allied health, psychology and business, explore different aspects of practice in the professions, professionalism, and research. This includes engaging with the burgeoning literature on practice theory and philosophy, including the increasingly influential neo-Aristotelian tradition, and taking account of growing interest in practice thinking across contemporary scholarship. It considers issues such as the primacy of practice, the nature of professional judgement, the role of 'experience', ethics, context, and the practitioner standpoint. As such, it raises important and timely questions about practice ontologies, epistemologies and methodologies, and also praxis and politics. This is especially needed in a context otherwise increasingly organised by neoliberalism, economic rationality, anxious managerialism, and what some see as a general drive towards de-professionalisation and new nuances and intensities of regulation. The book will likely speak, across education, health and professional studies more generally, to all who remain committed, in increasingly stringent and difficult times, to finding ways of thinking anew about their work as practitioners and researchers. A richly informed resource for those engaged in researching practice and practising research, it will inform praxis and inquiry alike.

Understanding Actuarial Practice Jan 29 2020 New required text for the FAP Modules, as of January 31, 2012. A critical point in an actuary's education is the transition from understanding the mathematical underpinnings of actuarial science to putting them into practice. The problems become less well-defined and the solutions less clear-cut. Understanding Actuarial Practice is designed to aid that transition in four of the areas in

which actuaries practice: investments, life insurance and annuities, retirement benefits, and health insurance. In each area students are introduced to the products that are delivered in each area and the relevant methods with regard to pricing, reserving and funding. Examples are supported by readily available spreadsheets and there are numerous exercises that reinforce the concepts. While written expressly for use in the Society of Actuaries Fundamentals of Actuarial Practice Course, this book is a valuable resource for anyone who desires to learn how actuarial principles are put into practice.

Understanding and Promoting Transformative Learning Oct 27 2019 The third edition of Patricia Cranton's Understanding and Promoting Transformative Learning brings a wealth of new insight from the tremendous growth in the field during the decade since the previous edition. As in the previous editions, the book helps adult educators understand what transformative learning is, distinguish it from other forms of learning, and foster it in their practice. The first part of the book is dedicated to clarifying transformative learning theory and relating it to other theoretical frameworks. The author examines transformative learning from the learner's perspective, and discusses individual differences in how learners go through the process. In the second half of the book, the focus is squarely on strategies for promoting transformative learning in a wide variety of adult and higher education contexts. Practitioners will be able to take ideas from the text and apply them directly in their teaching. Since 1975, transformative learning has become a core theoretical perspective in adult and higher education, and research has proliferated. In the past decade, adult education and especially transformative learning grew into a noticeably larger field. The numbers of undergraduate and graduate programs in adult education have increased and continue to increase as more and more individuals are seeking the expertise, skills, and training necessary to work with adult learners in higher education, business, industry, government, health professions, non-profit organizations, and community development. In addition, the number of programs in higher education (both undergraduate and graduate) that include courses in transformative learning has grown dramatically. These academic audiences use the book to further their understanding of transformative learning theory and practice. Drawing on the latest research as well as the author's own teaching experience in both online and face-to-face courses, this new edition will be a vital resource for members of the transformative learning community, as well as those encountering the topic for the first time.

"Proof," Policy, and Practice Nov 28 2019 How can we "fix" our schools? Improve graduation rates in college? What works? These are questions that make the headlines and vex policy makers, practitioners, and educational researchers. While they strive to improve society, there are frequently gulfs of mutual incomprehension among them. Academics, longing for more influence, may wrongly fault irrationality, ideology, or ignorance for the failure of research to inform policy and practice more powerfully. Policy makers and practitioners may doubt that academics can deliver ideas that will reliably yield desirable results. This book bridges the divide. It argues that unrealistic expectations lead to both unproductive research and impossible standards for "evidence-based" policy and practice, and it offers promising ways for evidence to contribute to improvement. It analyzes the utility and limitations of the different research methods that have been applied to policy and practice, as well as the strengths and weaknesses of educational reform strategies. It explains why using evidence for "accountability" often makes things worse rather than better. Paul Lingenfelter offers educational researchers and policy makers a framework for considering such questions as: What problems are important and accessible? What methods will be fruitful? Which help policy makers and practitioners make choices and learn how to improve? What information is relevant? What knowledge is valid and useful? How can policy makers and practitioners establish a more productive division of labor based on their respective capabilities and limitations? He cautions against the illusion that straight-forward scientific approaches and data can be successfully applied to society's most complex problems. While explaining why no single policy or intervention can solve complex problems, he concludes that determination, measurement, analysis, and adaptation based on evidence in specific situations can lead to significant improvement. This positive, even-handed introduction to the use of research for problem-solving concludes by suggesting emerging practices and approaches that can help scholars, practitioners, and policy leaders become more successful in reaching their fundamental goals.

How does it differ from traditional teaching approaches? What does it look like in the classroom? And, how do students demonstrate their understanding? The book presents a framework for helping teachers learn how to teach more effectively.

Understanding Assessment May 15 2021 This is the first title in this new series, which is aimed principally at secondary PGCE and BAEd students and school- and HEI-based tutors. Each book provides a digest of the central issues around a particular topic or issues, grounded in or supported by examples of good practice, with suggestions for further reading, study and investigation. The books are not intended as 'how to' books, but rather as books which will help students and teachers to explore and understand critical theoretical issues in ways that are challenging, that invite critical reappraisals of taken-for-granted practices and perceptions, and that provide appropriate links between theory and practice. Issues related to equal opportunities and special needs are included in each separate volume . There are boxes of questions, 'think abouts' , further reading, and bulleted summary lists for the reader. This book is written specifically for teachers-in-training which will clarify the 'big picture' of monitoring and assessment and makes the crucial distinctions in this large (and still taken-for-granted) field. The authors have written widely on assessment matters and have also worked in various capacities for the QCA (and its former manifestations). They are also engaged in initial teacher education and so know the level and market extremely well.
