Television Development Nov 21 2021 Development is a large and central part of the American TV industry, and yet the details of how it works – who makes development decisions and why, where ideas for new shows come from, even basics like the differences between what TV studios and TV networks do – remain elusive to many. In this book, lecturer and acclaimed television producer Bob Levy offers a detailed introduction to television development, the process by which the Hollywood TV industry creates new scripted series. Written both for students and industry professionals, *Television Development* serves as a comprehensive introduction to all facets of the development process: the terminology, timelines, personnel and industrial processes that take a new TV project from idea to pitch to script to pilot to series. Written by the renowned producer responsible for developing and executive producing *Gossip Girl* and *Pretty Little Liars*, *Television Development* is an essential starting point for students, executives, agents, producers, directors and writers to learn how new series are created. After their child is diagnosed with DSD, parents need answers to a host of questions, including ? What is DSD, why does it occur, how is it identified, and how is it treated?? Did we do something to cause our child's DSD?? Is my baby a boy or a girl?? Will my child grow up to be normal and healthy?? Does my child need surgery? This concise book answers parents' questions in a reassuring and forthright way, giving affected individuals, their families, and their health care providers a current and evidence-based picture of DSD. It offers clear explanations of how newborns with DSD are evaluated, diagnosed, and treated; describes the different kinds of DSD; and pays close attention to both psychosocial and medical aspects of DSD. This guide also includes information about the importance of support groups and education for affected individuals and their families. Disability and International Development Sep 07 2020 Despite growing evidence of a close and complex relationship between disability and poverty, development policy, planning and programming has often failed to take full account of the concerns of disabled people. However, following the 2006 UN Convention on the Rights of Persons with Disabilities and the post-2015 sustainable development agenda, which promises to 'leave no one behind', there have been increasing calls from governments and development agencies for disability to be mainstreamed into all development planning. Disability and International Development provides a comprehensive overview of key themes in the field of disability and development, including issues around identity, poverty, disability rights, education, health, livelihoods, disaster recovery and approaches to researching disability. The book engages with relevant theory and draws on existing literature in the field, as well as the author's own research and teaching experience, to explore key issues using a range of examples taken from around the world. Written in an accessible and engaging style to suit both students and practitioners, the book also includes a wide range of reflection exercises, discussion questions and further reading suggestions, making it the perfect introduction to disability and international development.

A Practical Guide to Drug Development in Academia Jul 18 2021 "A lot of hard-won knowledge is laid out here in a brief but informative way. Every topic is well referenced, with citations from both the primary literature and relevant resources from the internet." Review from Nature Chemical Biology Written by the founders of the SPARK program at Stanford University, this book is a practical guide designed for professors, students and clinicians at academic research institutions who are interested in learning more about the drug development process and how to help their discoveries become the novel drugs of the future. Often many potentially transformative basic science discoveries are not pursued because they are deemed 'too early' to attract industry interest. There are simple, relatively cost-effective things that academic researchers can do to advance their findings to the point that they can be tested in the clinic or attract more industry interest. Each chapter broadly discusses an important topic in drug development, from preclinical work in assay design through clinical trial design, regulatory issues and marketing assessments. After the practical overview provided here, the reader is encouraged to consult more detailed texts on specific topics of interest. "I would actually welcome it if this book's intended audience were broadened even more. Younger scientists starting out in the drug industry would benefit from reading it and getting some early exposure to parts of the process that they'll eventually have to understand. Journalists covering the industry (especially the small startup companies) will find this book a good reality check for many an over-hopeful press release. Even advanced investors who might want to know what really happens in the labs will find information here that might otherwise be difficult to track down in such a concentrated form."

More often than not, however, academic leaders are given little or no training on how to be savvy fundraisers for their institutions. Development for Academic Leaders is a much-needed resource that offers a concise yet comprehensive guide to fundraising for those who are new to the process. The book clarifies roles, responsibilities, programs, activities, politics, and funding sources as well as offering a review of the overall process. Written by Penelepe C. Hunt, a successful practitioner of and noted expert in academic fundraising, the book includes information on attracting and retaining effective development officers and contains suggestions for deans (and other campus leaders) for working effectively with these valued members of their institutions. Hunt introduces

novice fundraisers to the cycle of giving (identification, qualification, cultivation, solicitation, and stewardship) and provides information on how and when to take part in the fundraising process. She defines the various types of funding including annual gifts, major gifts, planned gifts, and principal gifts and reveals why ascertaining which type of gift will be most appealing to a donor is an important part of planning for a successful solicitation. Development for Academic Leaders also contains suggestions for overcoming reluctance on the part of leaders to ask potential donors for a gift. Hunt explains that donors do not give merely because our programs need and deserve support. They give because of their own desires, passions, and aspirations. Development for Academic Leaders also reveals the importance of participating in your institution's overall development communications efforts and offers a general overview of campaign and event principles and how you can use these funding strategies to the advantage of your college. For any academic leader who participates in their program's fundraising efforts, this important resource offers a wealth of information for becoming a creative, skilled, and successful part of the fundraising team.
