Reforming Corporate Retail Investor Protection Oct 28 2019 The spate of mis-selling episodes that have plagued the financial services industries in recent years has caused widespread detriment to investors. Notwithstanding numerous regulatory interventions, curtailing the incidence of poor investment advice remains a challenge for regulators, particularly because these measures are taken in a 'fire-fighting' fashion without adequate consideration being given to the root causes of mis-selling. Against this backdrop, this book focuses on the sale of complex investment products to corporate retail investors by drawing upon the widespread mis-selling of interest rate hedging products (IRHP) in the UK and beyond. It brings to the fore the relatively understudied field concerning the different degrees of investor protection mechanisms applicable to individual retail investors – as opposed to corporate retail investors – by taking stock of past regulatory reforms and forthcoming regulatory initiatives as well as, more importantly, the conclusions reached by the judiciary in IRHP mis-selling claims. The conclusions are particularly interesting: corporate retail investors are in a vulnerable position when compared to individual retail investors. The former are exposed to a heightened risk of mis-selling, meaning that regulatory intervention should be targeted accordingly. The recommendations made as a result of these findings are further supported by insights emerging from behavioural law and economic theories. This book is aimed at researchers, lawyers and students with an interest in the financial regulation field who are keen to explore potential regulatory reforms to the investment services regime that address the root causes of mis-selling, and restore a level playing field amongst all retail investors.

At Your Service? Feb 22 2022 Manufacturing-led development has provided the traditional model for creating jobs and prosperity. But in the past three decades the conventional pattern of structural transformation has changed, with the services sector growing faster than the manufacturing sector. This raises critical questions about the ability of developing economies to close productivity gaps with advanced economies and to create good jobs for more people. At Your Service? The Promise of Services-Led Development (www.worldbank.org/services-led-development) assesses the scope of a services-driven development model and policy directions that can maximize the model's potential.

Clinical Forensic Medicine Jan 12 2021 The publication of this third edition of the definitive text on clinical forensic medicine comes at an exciting time for a subject now gaining recognition as a speciality in the medical establishment. This growing acknowledgement reflects the fact that increasing numbers of health professionals are becoming engaged in general forensic services. Nurses and paramedics are more involved than ever in custody care, while nurses themselves are conducting more examinations in cases involving alleged sexual offences. Thus it is vital that those caring for this vulnerable group of patients (whether detainees or complainants) have the tools to master this specialist set of skills. All the chapters in this new edition have been fully updated, with some undergoing extensive revision. Recent developments in child protection protocols have prompted a major rewrite of the chapter on non-accidental injury, and the text now includes a specific chapter on the use of the TASER. Other aspects of restraint are now dealt with separately. The material on care of detainees and fitness for interview has been split into individual chapters to allow a more comprehensive discussion of the issues. In addition, new authors have joined the team of contributors, facilitating a wider range of international perspectives. From its chapters on the history and core principles of clinical forensic medicine, right up to the text's discussion of substance misuse and deaths in custody, this volume remains the gold standard source for health professionals whose working lives bring them into contact with those in the law enforcement arena.

Registries for Evaluating Patient Outcomes May 16 2021 This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DEClDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.

Developing and Maintaining Emergency Operations Plans: Comprehensive Preparedness Guide (CPG) 101, Version 2.0 Jun 24 2019 Comprehensive Preparedness Guide (CPG) 101 provides Federal Emergency Management Agency (FEMA) guidance on the fundamentals of planning and developing emergency operations plans (EOP). CPG 101 shows that EOPs are connected to planning efforts in the areas of prevention, protection, response, recovery, and mitigation. Version 2.0 of this Guide expands on these fundamentals and encourages emergency and homeland security managers to engage the whole community in addressing all risks that might impact their jurisdictions. While CPG 101 maintains its link to previous guidance, it also reflects the reality of the current operational planning environment. This Guide integrates key concepts from national preparedness policies and doctrines, as well as lessons learned from disasters, major incidents, national assessments, and grant programs. CPG 101 provides methods for planners to: Conduct community-based planning that engages the whole community by using a planning process that represents the actual population in the community and involves community leaders and the private sector in the planning process; Ensure plans are developed through an analysis of risk; Identify operational assumptions and resource demands; Prioritize plans and planning efforts to support their seamless transition from development to execution for any threat or hazard; Integrate and synchronize efforts across all levels of government. CPG 101 incorporates the following concepts from operational planning research and day-to-day experience: The process of planning is just as important as the resulting document; Plans are not scripts followed to the letter, but are flexible and adaptable to the actual situation; Effective plans convey the goals and objectives of the intended operation and the actions needed to achieve them. Successful operations occur when organizations know their roles, understand how they fit into the overall plan, and are able to execute the plan. Comprehensive Preparedness Guide (CPG) 101 provides guidelines on developing emergency operations plans (EOP). It promotes a common understanding of the fundamentals of risk-informed planning and decision making to help planners examine a hazard or threat and produce integrated, coordinated, and synchronized plans. The goal of CPG 101 is to make the planning process routine across all phases of emergency management and for all homeland security mission areas. This Guide helps planners at all levels of government in their efforts to develop and maintain viable all-hazards, all-threats EOPs. Accomplished properly, planning provides a methodical way to engage the whole community in thinking through the life cycle of a potential crisis, determining required capabilities, and establishing a framework for roles and responsibilities. It shapes how a community envisions and shares a desired outcome, selects effective ways to achieve it, and communicates expected results. Each jurisdiction's plans must reflect what that community will do to address its specific risks with the unique resources it has or can obtain. Planners achieve unity of purpose through coordination and integration of plans across all levels of government, nongovernmental organizations, the private sector, and individuals and families. This supports the fundamental principle that, in many situations, emergency management and homeland security operations start at the local level and expand to include Federal, state, territorial, tribal, regional, and private sector assets as the affected jurisdiction requires additional resources and capabilities. A shared planning community increases the likelihood of integration and synchronization, makes planning cycles more efficient and effective, and makes plan maintenance easier.
