Lifespan Development Feb 05 2021 "Takes a lifespan approach with much greater emphasis on adulthood and 'old' age than many other developmental books. This reflects the continual increase in this portion of the population in present day society. Uses one central model (the 'challenge-risk' model) throughout to tie all the different stages of the lifespan together, making this topic much less confusing for students. Introduces other theoretical models where appropriate to provide a balanced view of approaches to the subject. Includes world-wide research findings and examples. Considers developmental psychology as an interdisciplinary topic, looking at motor, cognitive and social skills together rather than as unrelated topics." --Thomson.

Lifespan Developmental Systems Dec 23 2019 Everything you always wanted to know about theories, meta-theories, methods, and interventions but didn't realize you needed to ask. This innovative textbook takes advanced undergraduate and graduate students "behind the curtain" of standard developmental science, so they can begin to appreciate the generative value and methodological challenges of a lifespan developmental systems perspective. It envisions applied developmental science as focused on ways to use knowledge about human development to help solve societal problems in real-life contexts, and considers applied developmental research to be purpose driven, field based, community engaged, and oriented toward efforts to optimize development. Based on the authors' more than 25 years of teaching, this text is designed to help researchers and their students intentionally create a cooperative learning community, full of arguments, doubts, and insights, that can facilitate their own internal paradigm shifts, one student at a time. With the aid of extensive online supplementary materials, students of developmental psychology as well as students in other psychological subdisciplines (such as industrial-organizational, social, and community psychology) and applied professions that rely on developmental training (such as education, social work, counseling, nursing, health care, and business) will find this to be an invaluable guidebook and toolbox for conceptualizing and studying applied problems from a lifespan developmental systems perspective.

Lifespan Development Oct 01 2020 Lifespan Development: Biopsychosocial Perspectives provides students with complete explorations of each developmental stage of the lifespan, beginning with conception and concluding with an examination of successful aging. The book presents human development theory and research within a biopsychosocial framework, presenting information regarding biological, psychological, and social functioning during each significant period of the lifespan. The first chapter of the text presents

readers with an introduction to human development, addressing the meaning of age and aging, the four key principles of human development, the social factors that influence the study of human development, and more. The succeeding chapters progress in step with the human lifespan, beginning with conception and prenatal development, moving through infancy, childhood, adolescence, and adulthood, and concluding with chapters devoted to later life. The biopsychosocial perspective of the text emphasizes the transactional nature of biological, psychological, and social influences on the developing individual with a focus on positive development and the implications on health and wellness. It emphasizes the applied nature of the biopsychosocial perspective. Each chapter begins with a real-life scenario, challenging students to take the perspectives of individuals and practitioners dealing with issues at every stage of development. Lifespan Development and the Brain Jul 22 2022 The book focuses on the developmental analysis of the brain-culture-environment dynamic and argues that this dynamic is interactive and reciprocal. Brain and culture co-determine each other. As a whole, this book refutes any unidirectional conception of the brain-culture dynamic. Each is influenced by and modifies the other. To capture the ubiquitous reach and significance of the mutually dependent brain-culture system, the metaphor of biocultural co-constructivism is invoked. Distinguished researchers from cognitive neuroscience, cognitive psychology and developmental psychology review the evidence in their respective fields. A special focus of the book is its coverage of the entire human lifespan from infancy to old age.

Life-span Development Dec 15 2021 This thorough revision of the highly successful first edition of Life-Span Development offers the reader a wide-ranging and thought provoking account of human development throughout the lifespan. The lifespan approach emphasises that development does not stop when we cease to be adolescents but goes on throughout adulthood and into old age. In initial chapters Leonie Sugarman outlines the issues surrounding the notion of development and how it can be studied, including reviews of the work of key theorists Erikson, Levinson and Gould. She goes on to consider the different ways in which the life course can be construed: as a series of age-related stages; as a cumulative sequence; as a series of developmental tasks; as a series of key life events and transitions or as a narrative construction which creates a sense of dynamic continuity. A final chapter looks at how people cope, the resources that are

available and the theoretical and practical issues regarding interventions to assist them in the process. New to this edition is increased coverage of the topical issue of successful ageing and a new chapter on the increasingly popular narrative approach to lifespan development. This edition is also more student-friendly with exercises in self-reflection that encourage the reader to look at the development of their own lives or those of their current or future clients. Boxed material highlighting major theories and clarifying concepts is also included. This book will be invaluable for students of developmental and occupational psychology and professionals in the fields of health management, education and social work.
