Practical Principles of Instructional Design, Media Selection, and Interface Design with a Focus on Computer-based Training / Educational Software Dec 31 2019 This book is intended for students, instructional designers, professors, instructors, teachers, trainers, software developers, and development team leaders who:

- are taking a course on creating computer-based training/educational software applications
- are or will be working on a computer-based training/educational software development team
- need to expand their skills into the multimedia technology field
- are excited about the possibilities of teaching with multimedia
- have worked on their own and unsuccessfully tried to do it all
- may have created mediocre computer-based training/educational software
- want to do it right the first time
- need a practical reference
- need practical guidelines for creating computer-managed presentations

This book focuses on the practical principles of creating computer-based training/educational software applications and computer-managed presentations. In computer-based training/educational software applications, the computer assumes the teaching role. In computer-managed presentations, you maintain the responsibility for teaching the learners and use what is contained in the presentation as a resource. In a sense, computer-managed presentations are a subset of computer-based training/educational software applications. Their differences will be highlighted throughout this book. This book will not make you an expert in designing computer-based training/educational software applications. Expertise comes through years of experience and continual learning. However, this book will provide you with the foundations for creating professional, instructionally-effective products. To gain support for your computer-based training/educational software applications and computer-managed presentations and to silence the critics, it is important to create excellent products. People will notice quality much more than quantity. This is especially true for your first project. This book, with its numerous practical hints, will help you do it right from your first project onward.

Contemporary Issues in Bioethics Sep 27 2019 The main strength of this book is the international exchange of ideas that will not only highlight many of these crucial bioethical issues but will strengthen the discipline of bioethics both nationally and globally. A critical exchange of ideas allows everyone to learn and benefit from the insights gained through others experiences. Analyzing and understanding real medical-ethical issues and cases and how they are resolved is the basis of education in bioethics for those who will have to make these decisions in the future. The more we examine, analyze, and debate these bioethical issues and cases, the more knowledge will be gained and hopefully, we will all gain more practical wisdom.

Brigade Battle Staff Training System Jan 12 2021 "This report documents development of the Brigade Battle Staff Training System (BDE-BSTS). BDE-BSTS, a set of functional area training packages for brigade-level staff officers, is a combination of text and computer-based instruction (CBI). Sponsored by the Advanced Research Projects Agency (ARPA), the BDE-BSTS was developed for use by the U.S. Army National Guard (ARNG). The prototype BSTS comprised 13 courses for training brigade staff officers in individual functional areas and those tasks required to prepare staff for collective battle staff tasks. The BSTS program, sponsored under the ARPA program umbrella of Simulation in Training for Advanced Readiness (SIMITAR), is coordinated with three other programs: Simulation-Based Mounted Brigade Training Program (SIMBART), Simulation-Based Multiechelon Training for Armor Units (SIMUTA) and Combat Service Support (CSS) Training System Development for the National Guard."--DTIC.

VISUAL BASIC .NET AND DATABASE: PRACTICAL TUTORIALS May 16 2021 This book aims to develop a MySQL-driven desktop application that readers can develop for their own purposes to implement library project using Visual Basic .NET. In Tutorial 1, you will build a Visual Basic interface for the database. This interface will be used as the main terminal in accessing other forms. This tutorial will also discuss how to create login form and login table. You will create login form. Place on the form one picture box, two

labels, one combo box, one text box, and two buttons. In Tutorial 2, you will build a school inventory project where you can store information about valuables in school. The table will have nine fields: Item (description of the item), Quantity, Location (where the item was placed), Shop (where the item was purchased), DatePurchased (when the item was purchased), Cost (how much the item cost), SerialNumber (serial number of the item), PhotoFile (path of the photo file of the item), and Fragile (indicates whether a particular item is fragile or not). In Tutorial 3, you will perform the steps necessary to add 5 new tables using phpMyAdmin into Academy database. You will build each table and add the associated fields as needed. Every table in the database will need input form. In this tutorial, you will build such a form for Author table. Although this table is quite simple (only four fields: AuthorID, Name, BirthDate, and PhotoFile), it provides a basis for illustrating the many steps in interface design. SQL statement is required by the Command object to read fields (sorted by Name). Then, you will build an interface so that the user can maintain the Publisher table in the database (Academy). The Publisher table interface is more or less the same as Author table interface. This Publisher table interface only requires more input fields. So you will use the interface for the Author table and modify it for the Publisher table. In Tutorial 4, you will perform the steps necessary to design and implement title form, library member form, and book borrowal form. You start by designing and testing the basic entry form for book titles. The Title table has nine fields: BookTitle, PublishYear, ISBN, PublisherID, AuthorID, Description, Note, Subject, and Comment. Then, you will build such a form for Member table. This table has twelve fields: MemberID, FirstName, LastName, BirthDate, Status, Ethnicity, Nationality, Mobile, Phone, Religion, Gender, and PhotoFile). You need thirteen label controls, one picture box, six text boxes, four comboboxes, one check box, one date time picker, one openFileDialog, and one printpreviewdialog. You also need four buttons for navigation, six buttons for controlling editing features, one button for searching member's name, and one button to upload member's photo. Finally, you will build such a form for Borrow table. This table has seven fields: BorrowID, MemberID, BorrowCode, ISBN, BorrowDate, ReturnDate, and Penalty. In this form, you need fourteen label controls, seven text boxes, two comboboxes, two date time pickers, and one printpreviewdialog. You also need four buttons for navigation, seven buttons for other utilities, one button to generate borrowal code, and one button to return book.

Nurse Practitioners in Primary Care Apr 02 2020 Stroke is the leading cause of disability and the third leading cause of death in the developed world. The past decade has witnessed a paradigm shift in the management of stroke, with the understanding that care of acute stroke patients by specialists working in dedicated stroke units greatly improves patient outcomes; as a consequence, stroke units

now exist in all major hospitals in the UK and Europe. Interventions to treat stroke have also increased in complexity, and the discipline of stroke medicine is now recognised as a medical specialty. This book is a concise, accessible and authoritative source of relevant and focussed information about stroke disease. It contains a thorough review of the management of cerebrovascular disease - everything you need to function effectively on an acute stroke unit. Tables and diagrams aid quick reference and easy comprehension. The most up-to-date and clinically relevant resource on the market, Stroke in Practice equips all medical professionals with evidence-based, practical knowledge and a comprehensive understanding of treatment of stroke. 'This text is directed at the non-specialist and emphasises practicality over academic niceties. If it inspires enthusiasm for a fascinating condition and convinces the reader that stroke is preventable, treatable and yet potentially devastating for patients and their families, it will justify its existence.' from the foreword by Kennedy R Lees

PLC Practical Training with Demo Videos Jul 06 2020 This book and its supplemental demo videos make up an excellent practical training program that provides the foundation for installation, configuration, activation, troubleshooting and maintenance of Siemens SIMATIC S7 PLCs (programmable Logic Controllers) in an industrial environment. The 5 chapters of this book and its videos serve as an exhaustive collection of my step-by-step tutorials on PLCs for beginners and advanced learners alike. If you fall in the following categories of people, you will find this book very helpful: Engineers Electricians Instrumentation technicians Automation professionals Graduates and students People with no background in PLC programming but looking to build PLC programming skills This book is accompanied with 33 in-depth HD demo videos. In these videos, I use a practical approach to simplify everything you need to understand to help you speed up your learning of PLCs in general, and of Siemens S7 PLCs specifically. Because I assume you have little or no knowledge of PLCs, I strongly urge you to digest all the contents of this book and its supplemental demo videos (33 episodes). This will not only help you build an in-depth knowledge of PLCs in general; it will also help you gain a lot of job skills and experience you need to be able to install and configure Siemens PLCs. In this book I teach the fundamentals of SIMATIC S7 PLCs. I also touch advanced topics, such as PLC networks, virtual CPU, CPU models and what their codes mean, digital input and output configurations, and so much more. The knowledge you gain from this training will put you on the path to becoming a paid professional in the field of PLCs. The quickest way to build skills in PLC hardware and software is to use real-world scenarios and industrial applications. The real-world scenarios and industrial applications I treat in this book and the demo videos will help you learn better and faster many of the functions and features of both the S7 PLC family and the Step 7 software platform. If all you use is just a PLC user manual or S7 help contents, you cannot become a skillful PLC programmer. That is why I have designed this training program to help you develop skills by teaching you PLC hardware configuration and programming step by step. This will give you a big head start if you have never installed or configured a PLC before. One of the questions I get asked often by beginners is, where can I get a free download of Siemens PLC software to practice? I provide later in this book links to a free version of the SIMATIC S7 PLC Software which is essentially the programming environment you need to practice. In Chapter 3, I also provide two hassle-free download links for the free edition of SIMATIC STEP 7. This will help you get hands-on practice because you can use it to run and test your PLC programs on a PC or Mac. I do not only show you how to get this important Siemens automation software for free and without hassle, I also show how to install, configure, navigate and use them to program Siemens PLCs. Finally, if you have questions or need further help, you can use the support link I provide in Chapter 4. I will get back to you very quickly.

Force XXI Training Program-digital Project Dec 23 2021 "This report discusses tile Army's initial research into converting Force 21 Training Program (FXXITP) products to meet the increasingly pressing training needs of digital battle staffs. The report describes tile

activities and outcomes of the U.S. Research Institute for the Behavioral and Social Sciences (ARI) Force 21 Training Program Digital (FXXITP-D) project. The project developed an approach that supports the conversion of existing training products in order to meet new training needs. During the project, the conversion approach was employed to research and enact conventional to digital conversions of selected FXXITP products, including the Battle Staff Training System (BSTS) and Combined Arms Operations at Brigade Level, Realistically Achieved Through Simulation (COBRAS) vignettes, Brigade Staff Exercise (BSE), and Brigade and Battalion Staff Exercise (BBSE). In addition to the conversion approach and prototype digital training products, the project identified a number of lessons for the continuing development of digital training and the digital force."--Stinet.
