The Personality of Henry Cavendish - A Great Scientist with Extraordinary Peculiarities Nov 11 2020 Profiles the eminent 18th century natural philosopher Henry Cavendish, best known for his work in chemistry and physics and one of the most baffling personalities in the history of science. In these chapters we are introduced to the psychology of science and of scientists and we learn about Cavendish's life and times. His personality is examined from two perspectives: one is that he had a less severe form of autism, as has been claimed; the other is that he was eccentric and a psychological disorder was absent. Henry Cavendish lived a life of science, possibly more completely than any other figure in the history of science: a wealthy aristocrat, he became a dedicated scientist. This study brings new information and a new perspective to our understanding of the man. The scientific and non-scientific sides of his life are brought closer together, as the author traces topics including his appearance, speech, wealth, religion and death as well as Cavendish's life of natural philosophy where objectivity and accuracy, writing and recognition all played a part. The author traces aspects of Cavendish's personality, views and interpretations of him, and explores notions of eccentricity and autism before detailing relevant aspects of the travels made by our subject. The author considers the question "How do we talk about Cavendish?" and provides a useful summary of Cavendish's travels. This book will appeal to a wide audience, from those interested in 18th century history or history of science, to those interested in incidences of autism in prominent figures from history. This volume contains ample relevant illustrations, several interesting appendices and it includes a useful index and bibliography.

Who Are You, Really? May 06 2020 "Traditionally, scientists have emphasized what they call the first and second natures of personality--genes and culture, respectively. But today the field of personality science has moved well beyond the nature vs. nurture debate. In *Who Are You, Really?* Dr. Brian Little presents a distinctive view of how personality shapes our lives--and why this matters. Little makes the case for a

third nature to the human condition--the pursuit of personal projects, idealistic dreams, and creative ventures that shape both people's lives and their personalities. Little uncovers what personality science has been discovering about the role of personal projects, revealing how this new concept can help people better understand themselves and shape their lives"--Provided by publisher.

Personality and Temperament in Nonhuman Primates Sep 21 2021 Recently, there has been an increased interest in research on personality, temperament, and behavioral syndromes (henceforth to be referred to as personality) in nonhuman primates and other animals. This follows, in part, from a general interest in the subject matter and the realization that individual differences, once consigned to 'error' terms in statistical analyses, are potentially important predictors, moderators, and mediators of a wide variety of outcomes ranging from the results of experiments to health to enrichment programs. Unfortunately, while there is a burgeoning interest in the subject matter, findings have been reported in a diverse number of journals and most of the methodological and statistical approaches were developed in research on human personality. The proposed volume seeks to gather submissions from a variety of specialists in research on individual differences in primate temperament, personality, or behavioral syndromes. We anticipate that chapters will cover several areas. The first part of this edited volume will focus on methodological considerations including the advantages and disadvantages of different means of assessing these constructs in primates and introduce some statistical approaches that have typically been the domain of human personality research. Another part of this edited volume will focus on present findings including the physiological and genetic bases of personality dimensions in primates; the relationship between personality and age; how personality may moderate or impact various outcomes including behavior, health, and well-being in captive and non-captive environments. For the third part of the volume we hope to obtain summaries of the existing work of the authors on the evolutionary importance of personality dimensions and guideposts for future directions in this new and exciting area of research.

The book begins by discussing how personality is measured, the concept of a personality trait, and the basic dimensions of personality. This leads to a discussion of the origins of personality, with descriptions of its developmental course, its biological causes, its genetic and environmental influences, and its evolutionary function. The concept of a personality disorder is then described, followed by a discussion of the influence of personality on life outcomes in relationships, work, and health. Finally, the book examines the important differences between individuals in the realms of mental abilities, of beliefs and attitudes, and of behavior. Presents a scientific approach to personality and related individual differences, as well as theory and research on the fundamental questions about human psychological variation New edition presents findings from dozens of new research studies of the past six years Includes new chapter on vocational interests and a revised chapter on personality disorders reflecting DSM-5 formulation Contains streamlined descriptions of measurement concepts and heritability research Includes various boxes containing interesting asides that help to maintain the student's attention.

The Personality of Paris Feb 01 2020 What was the personality of 19th-century Paris? To answer that question, this book eschews the conventional narrative and chronological route taken by most histories of Paris. Instead, it thematically analyses the complex personality traits of Paris from the onset of the Revolution of 1789 to the beginning of the Great War. Starting with the topographical and cultural legacies that late 18th-century Paris inherited from its foundation in pre-Roman and Roman times and from its medieval infancy and early-modern adolescence, *The Personality of Paris* unpacks the social and material complexity of the 19th-century city. It considers the role of immigration in the making of Parisians and in the city's growth from half a million in 1801 to almost three million in 1911. It examines the making of its distinctive landscape through the construction of monuments and architectural icons, through its massive re-modelling by Napoléon III and Baron Haussmann, through its five world exhibitions, through its emphasis on food, fashion and leisure, and through the ways in which Parisians sought rural release from urban pressure. Finally, the book considers the self-harm done to the person of 19th-century Paris by revolutions and wars and the damage inflicted on it by 20th-century hubristic politicians and architects.

The H Factor of Personality Aug 09 2020 The "H" in the H factor stands for "Honesty-Humility," one of the six basic dimensions of the human personality. People who have high levels of H are sincere and modest; people who have low levels are deceitful and pretentious. It isn't intuitively obvious that traits of honesty and humility go hand in hand, and until very recently the H factor hadn't been recognized as a basic dimension of personality. But scientific evidence shows that traits of honesty and humility form a unified group of personality traits, separate from those of the other five groups identified several decades ago. This book, written by the discoverers of the H factor, explores the scientific findings that show the importance of this personality dimension in various aspects of people's lives: their approaches to money, power, and sex; their inclination to commit crimes or obey the law; their attitudes about society, politics, and religion; and their choice of friends and spouse. Finally, the book provides ways of identifying people who are low in the H factor, as well as advice on how to raise one's own level of H.

Me, Myself, and Us Mar 16 2021 In the past few decades, personality psychology has made considerable progress in raising new questions about human nature—and providing some provocative answers. New scientific research has transformed old ideas about personality based on the theories of Freud, Jung, and the humanistic psychologies of the nineteen sixties, which gave rise to the simplistic categorizations of the Meyer-Briggs Inventory and the 'enneagram'. But the general public still knows little about the new science and what it reveals about who we are. In this book, Brian Little, one of the psychologists who helped re-shape the field, provides the first in-depth exploration of the new personality science and its provocative findings for general readers. The book explores questions that are rooted in the origins of human consciousness but are as commonplace as yesterday's breakfast conversation. Are our first impressions of other people's personalities usually fallacious? Are creative individuals essentially maladjusted? Are our personality traits, as William James put it “set like plaster” by the age of thirty? Is a belief that we are in control of our lives an unmitigated good? Do our singular personalities comprise one unified self or a confederacy of selves, and if the latter, which of our mini-me-s do we offer up in marriage or mergers? Are some individuals genetically hard-wired for happiness? Which is the more viable path toward human flourishing, the pursuit of happiness or the happiness of pursuit? Little provides a resource for answering such questions, and a framework through which readers can explore the personal implications of the new science of personality. Questionnaires and interactive assessments throughout the book facilitate self-exploration, and clarify some of the stranger aspects of our own conduct and that of others. Brian Little helps us see ourselves, and other selves, as somewhat less perplexing and definitely more intriguing. This is not a self-help book, but students at Harvard who took the lecture course on which it is based claim that it changed their lives.

More Than a Feeling Dec 13 2020 Whatever you think about the widening divide between Democrats and Republicans, ideological differences do not explain why politicians from the same parties, who share the same goals and policy preferences, often argue fiercely about how best to attain them. This perplexing misalignment suggests that we are missing an important piece of the puzzle. Political scientists have increasingly drawn on the relationship between voters' personalities and political orientation, but there has been little empirically grounded research looking at how legislators' personalities influence their performance on Capitol Hill. With *More Than a Feeling*, Adam J. Ramey, Jonathan D. Klingler, and Gary E. Hollibaugh, Jr. have developed an innovative framework incorporating what are known as the Big Five dimensions of personality—openness to experience, conscientiousness, extraversion, agreeableness, and neuroticism—to improve our understanding of political behavior among members of Congress. To determine how strongly individuals display these traits, the authors identified correlates across a wealth of data, including speeches, campaign contributions and expenditures, committee involvement, willingness to filibuster, and even Twitter feeds. They then show how we might expect to see the influence of these traits across all aspects of

Congress members' political behavior—from the type and quantity of legislation they sponsor and their style of communication to whether they decide to run again or seek a higher office. They also argue convincingly that the types of personalities that have come to dominate Capitol Hill in recent years may be contributing to a lot of the gridlock and frustration plaguing the American political system.

The General Factor of Personality Apr 04 2020 The General Factor of Personality improves our understanding of the personality structure and the relations between major personality dimensions, as well as major dimensions of the entire non-cognitive sphere of psychological variables. The results of the empirical testing and theoretical evaluations in this book contribute to the more comprehensive and precise theoretical framework of the General Factor of Personality (GFP) and that of the entire personality structure. Additionally, the book answers some unresolved questions concerning the nature of the GFP, including whether it is based more on correlations in real behavior or on other less substantial factors between lower-order dimensions of personality. This book is crucially important not only for theoretical reasons, but also for the tremendous practical and applied value of the assumed general dimension of personality. As a common denominator of all the most important fields of personality beyond cognition (Big Five, well-being, coping, emotionality, motivation, self-concept, self-esteem, control, wisdom and others), the GFP represents an extremely strong single predictor of the quality of life, mental health and well-being, career, academic success, and the quality of family and interpersonal relations. Reviews the theoretical and methodological work on the General Factor of Personality (GFP) Presents major research results in the field of GFP and the dimensional structure of personality Provides a balanced and objective approach to the topic of GFP, addressing criticisms and controversies Considers the practical and applied aspects of this research Draws conclusions on the bioevolutionary model of GFP to give a more thorough understanding of biological bases of human personality
