The Dangers of Automation in Airliners Apr 04 2020 The award-winning journalist delves “into the confluence of modern airplane technology and pilot behavior to probe how and why flight disasters happen” (BookTrib). Aviation automation has been pushed to its limits, with pilots increasingly relying on it. Autopilot, autothrottle, autoland, flight management systems, air data systems, inertial guidance systems. All these systems are only as good as their inputs which, incredibly, can go rogue. Even the automation itself is subject to unpredictable failure. And what of the pilots? They began flight training with their hands on the throttle and yoke, and feet on the rudder pedals. Then they reached the pinnacle of their careers—airline pilot—and suddenly they were going hours without touching the controls other than for a few minutes on takeoff and landing. Are their skills eroding? Is their training sufficient to meet the demands of today's planes? The Dangers of Automation in Airliners delves deeply into these questions. You'll be in the cockpits of the two doomed Boeing 737 MAXs, the Airbus A330 lost over the South Atlantic, and the Bombardier Q400 that stalled over Buffalo. You'll discover exactly why a Boeing 777 smacked into a seawall, missing the runway on a beautiful summer morning. And you'll watch pilots battling—sometimes winning and sometimes not—against automation run amok. This book also investigates the human factors at work. You'll learn why pilots might overlook warnings or ignore cockpit alarms. You'll observe automation failing to alert aircrews of what they crucially need to know while fighting to save their planes and their passengers. The future of safe air travel depends on automation. This book tells its story.

Britannia Airways Feb 01 2020 A history of the British airline company, featuring details on the aircrafts, routes, and operations, as well as stories from the crews and staff. Founded in 1961 as Euravia by British businessman Ted Langton and aviation consultant J.E.D. Walker, at a time of considerable turmoil for the independent sector of the British air operators' industry, Britannia Airways went on to become the world's largest holiday airline. Just as Court Line evolved from Autair, so Britannia Airways evolved from Euravia. Both UK airlines had strong links with the travel industry; Court Line with Clarksons Holidays, and Britannia with the Thomson Group, in particular the 'Sky Tours' brand. Both were innovative in their own ways, and both grabbed the UK travel industry by the scruff of the neck and shook it into the jet age - Court line traveling down the brasher cheap-and-cheerful road, while Britannia took the more staid, upmarket route. By 1972,

Britannia had developed to such a degree that it was the biggest of the British independent charter airlines. It was also a groundbreaking operation—during the late 1960s, it became the first charter airline to offer assigned seating, as well as hot in-flight meals. Prior to the mid-1970s, Britannia, much like other British charter airlines of the era, had concentrated upon low-cost flights to Spain and the use of provincial airports to provide its services. The company's management, however, harbored ambitions to grow beyond this. As a result, for example, Britannia's 767s began regular charter flights between Britain and Australia in 1988, a route to New Zealand being added the following year. Between 1968 and 1984, Britannia carried nearly forty-two million passengers, while the company's fleet grew to include twenty-nine Boeing 737s and a pair of 767s. Drawing on the author's in-depth research and knowledge, as well as firsthand interviews with individuals such as Ted Langton, the original tour operator who wanted his own airline, and Jed Williams, who created Britannia, this is the full story of one of the most important airlines in the history of civil aviation.
