MRI-Arthroscopy Correlations Jan 29 2020 Integrating MRI findings  
associated with the spectrum of problems seen in the most commonly  
treated joints in sports medicine with the diagnostic findings seen  
during arthroscopy of the same joint in the same patient, this unique  
text correlates this pathology and applies these findings to the  
clinic, the radiology reading room and the operating suite.

Representing a microcosm of daily patient care, this atlas of  
interactive correlation is an exceedingly effective tool for education  
and continued learning, an impetus for interdisciplinary research  
collaboration, and a critical part of an approach to optimum patient  
care. Furthermore, this case-based correlation between MRI imaging and  
arthroscopic findings and treatment has been a well-received and  
effective method for teaching and discussion at meetings and  
instructional courses. The second edition of this popular case atlas  
is organized into five sections highlighting the major joints in which  
MRI and arthroscopy are most commonly used in sports medicine: knee,  
shoulder, elbow, hip, and a brand new section on the ankle. Chapters  
have been reformatted to a consistent presentation, beginning with an  
overview of the specific disease entity and followed by selected cases  
chosen by the chapter authors that best illustrate common or  
noteworthy disease entities or pathology, with an emphasis on the  
parallel MRI imaging and arthroscopic findings. Throughout the text,  
updated arthroscopy images reflect current surgical techniques, many  
of which have changed significantly since the original edition was  
published. Authors and section editors, many new to this edition, are  
nationally recognized experts, teachers and pioneers in their  
respective areas of sports medicine and have covered the gamut of  
topics in each of their sections. Taken together, this will be an  
invaluable resource for sports medicine specialists, orthopedic  
surgeons and musculoskeletal radiologists alike, promoting  
increasingly accurate diagnoses of pathology and advanced treatment  
options to aid in the optimization of patient care and recovery.

Computational Science and Its Applications -- ICCSA 2015 Dec 10 2020

The five-volume set LNCS 9155-9159 constitutes the refereed proceedings of the 15th International Conference on Computational Science and Its Applications, ICCSA 2015, held in Banff, AB, Canada, in June 2015. The 232 revised full papers presented in 22 workshops and a general track were carefully reviewed and selected from 780 initial submissions for inclusion in this volume. They cover various areas in computational science ranging from computational science technologies to specific areas of computational science such as computational geometry and security.
