The Role of Friendship in Psychological Adjustment Mar 26 2022 This issue examines the specific role children's experience of friendship plays in their psychological adjustment, and shedding light on the neglected area of peer relations research. The authors discuss the theory and empirical work connecting friendship and adjustment that provides a

firm foundation for peer relations research. The authors present the results of an eighteen-year study addressing the question of whether acceptance and friendship are unique or redundant predictors of adult adjustment and well-being. They address the peer relationship difficulties experienced by children suffering from attention deficit/hyperactivity disorder; and they examine the potential iatrogenic consequences in the treatment of groups targeting antisocial youth. This volume also offers an informative and provocative essay tracing the conceptual and historical foundations of research and discussing the recent rise of interest in the peer system. This is the 91st issue of the Jossey-Bass series New Directions for Child and Adolescent Development.

Subsequent chapters, all written by leading experts in their respective areas, identify and elaborate four major themes regarding the self in social judgment: · the role of the self as an information source for evaluating others, or what has been called 'social projection' · the assumption of personal superiority as reflected in the pervasive tendency for people to view their characteristics more favorably than those of others · the role of the self as a comparison standard from or toward which other people's behaviors and attributes are assimilated or contrasted · the relative weight people place on the individual and collective selves in defining their attributes and comparing them to those of other people

Psychosocial Adjustment in Children and Adolescents with a Cleft

Nov 29 2019 Sociocultural norms may render people with a facial difference such as a cleft lip and palate more noticeable, and possibly more socially vulnerable. Given the importance of subjective appearance satisfaction for psychological health, knowledge is needed about risk and protective factors that might exacerbate or strengthen appearance satisfaction in the presence of a facial difference. This work is based on a large clinical sample of 661 children and adolescents with a cleft. Unlike most studies within this field of research, a thorough registration of comorbid difficulties is provided, while their consequences for psychological adjustment and its measurement are discussed. Associations between social experiences and subjective appearance evaluations are explored, suggesting that appearance satisfaction may be enhanced by positive social experiences, while appearance dissatisfaction may be exacerbated by peer harassment. Given findings of positive self-perceptions, this work also discusses protective factors and processes of resilience in individuals with a facial difference.

Acculturation and Psychological Adaptation Dec 31 2019 This volume examines the effects of intercultural contact and acculturation on individuals' feelings of self-regard in Latin American settings, revealing general aspects of the acculturation processes that may apply across groups and specific outcomes. It focuses on the effects of acculturation on self-esteem among adolescents. Opening with an account of relevant theoretical and empirical literature on interethnic contact and acculturation, it represents an "acid test" of the cross-cultural applicability of theory and method largely derived from research on

acculturation to North American and European settings. Much research has focused on acculturation processes among ethnic immigrants and ethnic minorities leading to the impression that host or majority groups remain unchangeable during acculturation. By contrast, this volume shows that psychological changes occur in all groups involved in the contact, reinforcing the idea that acculturation is a special case of mutual influence.

Prospects of Heart Surgery Sep 07 2020 Prospects of Heart Surgery: Psychological Adjustment to Coronary Bypass Grafting reports on a study of how patients and their spouses adjusted to the prospect, and then to the outcome, of coronary graft surgery. The focus upon patients' social relationships rather than upon individuals reveals that the way people bear their illness, and adapt to symptom removal, is part of a wider adjustment involving both the spouse and other individuals. The book offers, as one of its main contributions, a social-psychological approach to the study of illness in general. It sets out a new methodology which might be applied in a number of illness contexts. Using both qualitative and quantitative analyses, Prospects of Heart Surgery describes differences between smooth and problematic approaches to surgery as well as variations in the experience of rehabilitation afterwards.

Social and Emotional Adjustment and Family Relations in Ethnic Minority Families Mar 14 2021 This collection of essays addresses issues related to the intersection of family relationships and several contexts for the social and emotional development of ethnic minority adolescents. The papers are organized in sections under subtitles which reflect three contextual frames through which these issues may be examined. The first section focuses on the relationship between economic factors and resources on the one hand and family relations as environments for development on the other. The next part focuses on family and peer networks and relations as contexts for the emotional and social development of adolescents. The last section takes neighborhood and school as contexts for and determinants of social and emotional adjustment in adolescence. Like much of the extant work and current thought concerning development in ethnic minority children and adolescents, the authors have highlighted the more stressful and negative aspects of these several contexts. There are a few explicit and several implicit references made to supportive and more positive contexts and manifestations of relationships which frame the developmental experiences of ethnic minority adolescents. These serve as a reminder that many ethnic minority adolescents do overcome the odds against success and grow into healthy and wholesome adults. However, in large measure, this book is a contribution to our understanding of the problematic circumstances under which a significant segment of the population exists, reminding us that life for ethnic minority adolescents is difficult. The fact that some of these young people manage to overcome the negative and stressful aspects of their experiences and defy the implicit prediction of failure to thrive is truly remarkable.
