Servizi sanitari. Economia e Management Jul 28 2019 Il settore sanitario ha una grande rilevanza economica. In esso convivono formule diverse: il pubblico, il privato, il non-profit. La peculiarità del volume è quella di legare la prospettiva economica e quella manageriale. Nell'ambito della prima, l'analisi è condotta sia in ambito micro, per definire le condizioni di efficienza e di efficacia del servizio, sia in ambito macro, per individuare il contributo che il miglioramento delle condizioni di salute dà alla formazione del capitale umano, la cui accumulazione è alla base della crescita economica. Sono altresì affrontati i problemi di policy. Lo schema generale si basa sull'interazione tra domanda e offerta. I sei capitoli sono articolati in una lezione di base ed un ricco apparato di schede (oltre 70). L'approccio modulare consente l'utilizzo del testo a vari livelli: nei corsi di laurea, nelle lauree specialistiche, nei master; nella Facoltà di Medicina, di Economia, di Ingegneria.

La riforma de los sistemas de asistencia sanitaria Jan 14 2021 Esta publicación aporta nuevos elementos para profundizar en el conocimiento de las estrategias que han desarrollado los diferentes países dentro del objetivo de mejorar la eficiencia y equidad de sus sistemas sanitarios. En esta obra se destacan también la gran diversidad de las reformas y las diferencias en el ritmo del progreso de unos países a otros. El presente estudio sugiere que el poder resolutivo de los gobiernos puede ejercer una mayor influencia sobre la moderación del gasto sanitario, a la par que el éxito en la búsqueda de una más efectiva y eficiente aproximación al reparto del gasto sanitario. De con conformidad con el artículo 1 del Convenio firmado en París el 14 de diciembre de 1960, que entró en vigor el 30 de septiembre de 1961, la Organización para la Cooperación y el Desarrollo Económico (OCDE) promoverá las políticas encaminadas a: incrementar al máximo el crecimiento económico sostenible y el empleo y elevar el nivel de vida de los Estados miembros, manteniendo al mismo tiempo la estabilidad financiera, para contribuir al desarrollo de la economía mundial; contribuir al desarrollo económico tanto de los Estados miembros como de otros países en vías de desarrollo, y contribuir al desarrollo del comercio internacional mediante acuerdos multilaterales y no discriminatorios, de con conformidad con las obligaciones internacionales. Los Estados miembros originales de la OCDE son Austria, Bélgica, Canadá, Dinamarca, Francia, Alemania, Grecia, Islandia, Irlanda, Italia, Luxemburgo, Países Bajos, Noruega, Portugal, España, Suecia, Suiza, Turquía, Reino Unido y Estados Unidos. Los siguientes países se incorporaron posteriormente en las fechas que se indican: Japón (28 de abril de 1964), Finlandia (28 de enero de 1969), Australia (7 de junio de 1971), Nueva Zelanda (29 de mayo de 1973) y México (18 de mayo de 1994). La Comisión de las Comunidades Europeas participa en el trabajo de la OCDE (artículo 13 del Convenio de la OCDE). La presente publicación es traducción del texto oficial de la OCDE editado en inglés con el título «THE REFORM OF HEALTH CARE SYSTEMS. A Review of Seventeen OECD Countries». El responsable de esta traducción al español es el Ministerio de Sanidad y Consumo, que ha sido autorizado por el Servicio de Publicaciones de la OCDE para su coedición con el Boletín Oficial del Estado. Publicado en francés bajo el título: LA RÉFORME DES SYSTÈMES DE SANTÉ. ÉTUDE DE DIX-SEPT PAYS DE L'OCDE. The Dictionary of Health Economics, Second Edition May 06 2020 "Another masterpiece in health economics from a doyen in the field, this expanded and updated dictionary will undoubtedly become a standard reference work for scholars, practitioners and others working in this area. The definitions are concise, the coverage is comprehensive, the cross-referencing is excellent, and the subject and name indexes greatly assist navigation of this substantial tome. You will want to keep this one within arm's reach." Jim Butler, Australia National University "Health economics and health service research as well as health care policy, delivery and finance rely on a dizzying array of terms drawn from a diverse set of disciplines including (but not limited) to economics, epidemiology, risk science and statistics. Moreover, the health and health care systems are replete with acronyms and specialized institutions. The Dictionary of Health Economics provides the most comprehensive set of definitions and explanations of these terms available. It is a fantastic resource for anyone working in any health related field." Michael Chernew, Harvard Medical School, US "This dictionary is unique. What other dictionary borders on being an enjoyable read? Its breadth is quite astonishing. It is also very clearly a health economics dictionary and will allow those in mainstream economics, in the other social sciences and in health sciences and health care to understand and be better able to communicate with health economists. It will also be a most useful addition to the bookshelves of health economists like myself." Gavin Mooney, University of Sydney, Australia "This book is a welcome addition for graduate students or professionals interested in the taxonomy of health care." David Cutler, Harvard University, US "Health economics is at the crossroads of medicine, economics, statistics, insurance, and the law. This often makes for difficult reading. But help is now available thanks to this amazingly comprehensive Dictionary of Health Economics. I for one ran into several entries that I did not or did not fully understand, but the very clear explanations changed that within a few moments! This Dictionary is a true service to the scientific community." Peter Zweifel, University of Zurich, Switzerland "The Dictionary provides a comprehensive overview and authoritative yet accessible explanation of important terms and concepts from the increasingly important field of health economics. This excellent work will enable many entering this field, students and professionals alike, to quickly yet thoroughly grasp the meaning of the health economics jargon, facilitating study and (multi-disciplinary) co-operation. Anthony Culyer is sharing his impressive knowledge in this field in a clear and user-friendly fashion, hopefully to the benefit of many readers." Werner Brouwer, Erasmus University Rotterdam, the Netherlands "An essential book to steer the student away from a minefield of inaccurate and woolly definitions and an important resource of the practitioner of health economics. A book that offers the reader accuracy and rigour in the definitions it provides of key terms in health economics alongside ready access." John Brazier, University of Sheffield, UK This second edition of Culyer's authoritative Dictionary of Health Economics brings the material up to date and adds large amounts of new information. Some definitions have been revised. There are over 700 new entries. The Dictionary now also contains extensive references to the literature to identify original source material or to provide illustrations of the headword in use. The bibliography comprises some 1,000 items. In view of the huge growth in cost-effectiveness studies and the continuing variability in their quality, an appendix lists 100 high quality cost-effectiveness studies from all parts of the world. There are now many more entries and references relating to the developing world. New and separate subject and name indices provide supplementary means of searching the material and identifying individuals who have contributed significantly to the oeuvre.

Health Policy and High-tech Industrial Development Sep 09 2020 Health economists should consider the advantages of viewing a country's health system not only as a unique industry that produces both health care and high-technology goods and services, but that it also possess the ability to stimulate development of a broader array of high-technology industries. Development and industrial economists and policymakers will also see the health sector from this different and innovative perspective.

Rectal Cancer Mar 04 2020 Despite lifestyle improvements, the incidence of rectal cancer is increasing in industrialised countries. Rapid advances in technology, growing knowledge of the biological history of the disease and closer attention to patients' quality of life after surgery have led to a less invasive approach. In the last 15 years, the surgical approach has shifted from extended resection to sphincter-saving procedures, featuring a multidisciplinary approach and a high level of specialisation. The experienced surgeon can plan and choose the "right treatment for the right patient" only with the support of the radiologist, endoscopist and pathologist (preoperative staging), oncologist and radiotherapist (neoadjuvant therapy), and psychologist and stomatherapist (rehabilitation). In addition, the difficult problems of salvage procedure and the reconstruction of anal sphincter after abdominal resection are explored. The aim of this book is to clarify the rapid advances and to offer guidelines for doctors dealing with rectal cancer. Taking into account indications, contraindications, risks, benefits and controversies, the authors offer clear and practice-oriented answers for a wide range of specialists and experts, as well as those new to the field.

Il costo della salute. Un'introduzione all'economia sanitaria Feb 24 2022

From Information to Smart Society Nov 11 2020 This book presents a collection of research papers focusing on issues emerging from the interaction of information technologies and organizational systems. In particular, the individual contributions examine digital platforms and artifacts currently adopted in both the business world and society at large (people, communities, firms, governments, etc.). The topics covered include: virtual organizations, virtual communities, smart societies, smart cities, ecological sustainability, e-healthcare, e-government, and interactive policy-making (IPM). The book offers a multidisciplinary perspective on a variety of information systems topics. It is also particularly relevant to information systems practitioners such as IS managers, business managers and policy makers. The content is based on a selection of the best papers (original double-blind peer-reviewed contributions) presented at the annual conference of the Italian chapter of AIS, which was held in Milan, Italy in December 2013.

Health System Decentralization and Recentralization Aug 28 2019 This book explores the dynamics of health system decentralization and recentralization, investigating why and how the territorial organization of health systems changes or remains stable over time. Drawing from historical and discursive institutionalism, the explanatory framework revolves around the role of ideas, discourse and institutions. Through the analysis of the Italian and Danish health systems, the book corroborates the value of combining ideational and institutional accounts in explaining institutional continuity and change, offering new empirical and theoretical insights into the study of public policy making. The book will be of use to students and scholars interested in health politics and policy, federalism and decentralization, and theories of institutional change.

Manuale di economia sanitaria Nov 04 2022

Colonoscopy and Colorectal Cancer Screening Jul 08 2020 Colorectal cancer (CRC) represents a major public health problem worldwide. Fortunately most CRCs originate from a precursor lesion, the adenoma, which is accessible and removable. This is the rationale for CRC screening programs, which are aimed to diagnose CRC at an early stage or even better to detect and resect the advanced adenoma before CRC has developed. In this background colonoscopy emerges as the main tool to achieve these goals with recent evidence supporting its role in CRC prevention. This book deals with several topics to be faced when implementing a CRC screening program. The interested reader will learn about the rationale and challenges of implementing such a program, the management of the detected lesions, the prevention of complications of colonoscopy, and finally the use of other screening modalities that are emerging as valuable alternatives. The relevance of the topics covered in it and the updated evidence included by the authors turn this book into a very useful tool to introduce the reader in this amazing and evolving field.

Proceedings of the 11th Toulon-Verona International Conference on Quality in Services Oct 30 2019 The Toulon-Verona Conference was founded in 1998 by prof. Claudio Baccarani of the University of Verona, Italy, and prof. Michel Weill of the University of Toulon, France. It has been organized each year in a different place in Europe in cooperation with a host university (Toulon 1998, Verona 1999, Derby 2000, Mons 2001, Lisbon 2002, Oviedo 2003, Toulon 2004, Palermo 2005, Paisley 2006, Thessaloniki 2007, Florence, 2008). Originally focusing on higher education institutions, the research themes have over the years been extended to the health sector, local government, tourism, logistics, banking services. Around a hundred delegates from about twenty different countries participate each year and nearly one thousand research papers have been published over the last ten years, making of the conference one of the major events in the field of quality in services.

Southern European Welfare States Nov 23 2021 This volume is the first in English to be devoted entirely to the analysis of social policy developments in southern Europe. It comes at an opportune moment, for not only are the southern European welfare states - in common with their northern counterparts - under stress, but they have also only recently become the object of in-depth studies, exploring for the first time the particularities of the southern 'type' or 'model' of welfare. This collection contributes to this growing literature on two levels: first, it provides a series of both comparative and specific country analyses, furnishing new empirical detail and more general reflections on the character of social policy and welfare in Greece, Italy, Portugal and Spain. Second, it buttresses the argument that although welfare states in the region share many of the features of other European welfare states, the existence of specific features, levels of development and institutional forms provide them, collectively, with a 'hugely different socio-political etiquette' which makes them worthy of analysis in their own right.

Strumenti di economia sanitaria in medicina sociale Jun 30 2022

Economic and Medical Evaluation of Health Care Technologies Apr 04 2020 All too frequently, the largest effective barrier to interdisciplinary communication is jargon. The symposium whose proceedings appear in the following pages sought, of course, to eliminate unnecessary and obscurantist jargon; but it sought also to do something far more ambitious - to confront the intellectual issues that are attached to the use of the word "evaluation" in medicine and health services. To this end a carefully selected group of experts in medicine, epidemiology, and health economics was invited to present papers. They were selected for their reputations either as conceptualizers or as empirical evaluators, or - the rarest breed of expert - as both. The context was to be empirical. Three procedures were selected that had been subject to evaluation but that posed rather different types of problem. The first was the treatment of renal failure by dialysis of various kinds. This has a relatively long history of evaluation, with a large literature, and particularly raises broad policy issues within the health services of Western societies as to - the size of programmes to be provided; the type, location, and mix of treatments; the selection of patients to receive treatment; and the measurement of the success of various strategies. The second was the treatment of duodenal ulcer by a new species of drug - the histamine H₂ receptor antagonists (specifically, cimetidine).

Advancing the Service Sector with Evolving Technologies: Techniques and Principles Aug 21 2021 "This book discusses the application of information systems to service creation, modeling, and evolution, covering foundational concepts and innovations in service management, service-oriented computing, strategic information systems, and Web services"--Provided by publisher.

Co-Cities Feb 01 2020 A new model of urban governance, mapping the route to a more equitable management of a city's infrastructure and services. The majority of the world's inhabitants live in cities, but even with the vast wealth and resources these cities generate, their most vulnerable populations live without adequate or affordable housing, safe water, healthy food, and other essentials. And yet, cities also often harbor the solutions to the inequalities they create, as this book makes clear. With examples drawn from cities worldwide, Co-Cities outlines practices, laws, and policies that are presently fostering innovation in the provision of urban services, spurring collaborative economies as a driver of local sustainable development, and promoting inclusive and equitable regeneration of blighted urban areas. Identifying core elements of these diverse efforts, Sheila R. Foster and Christian Iaione develop a framework for understanding how certain initiatives position local communities as key actors in the production, delivery, and management of urban assets or local resources. Within this framework, they explain the forms such initiatives increasingly take, like community land trusts, new kinds of co-housing, neighborhood cooperatives, community-shared broadband and energy networks, and new local offices focused on citizen science and civic imagination. The "Co-City" framework is uniquely rooted in the authors' own decades-long research and first-hand experience working in cities around the world. Foster and Iaione offer their observations as "design principles"--adaptable to local context--to help guide further experimentation in building just and self-sustaining urban communities.

Public Health in Europe Jan 26 2022 With the background of the 10 years' existence of the European Public Health Association (EUPHA) the present book deals with the developments and results of European Public Health in Science and Practice. The contributions involve actual aspects and issues of different topics in Public Health: - Health care management and quality assurance in various settings - Health promotion and prevention for different population groups - Health related information and communication - Health care policy and science.

Perspectives of Information Processing in Medical Applications Jun 06 2020 Europe faces a challenge: how to apply information and communication technologies to health care. One problem is the widening gap between the expectations of citizens and the limited resources available to provide health services. It is here that advanced technology can serve as an important tool to find innovative and more efficient ways of delivering health services. This book reports the summary of a study performed under contract by a team of consultants for Directorate-General XIII of the Commission of the European Communities. It analyses the key factors governing the evolution of advanced information systems for health care and medicine in Europe and provides guidelines for placing current and future work within the framework of the Community research and development programmes.

New Business Models and Value Creation: A Service Science Perspective Mar 16 2021 The contemporary economic landscape features the prevalence of the service sector in economic systems, the pervasive servitisation of manufacturing, innovations in traditional business models and new value creation models, thanks to the new possibilities offered by the web, ICT and other enabling technologies. In this evolving context, this book provides qualified contributions on the topic of service science from a managerial perspective. A multidisciplinary perspective is adopted, dealing with both the structural-technological and dynamic-relational aspects of managing complexity. In addressing the contribution that service science can make to business value creation, this book covers relevant issues such as product servitisation, business modelling, value cocreation with customers, performance measures and the role of ICT. It also presents some innovative experiences of management models in service organisations operating in the environmental, energy and health-care sectors. This book aims to enhance the value of the results of research intertwined with the development of a new training curriculum started four years ago at the Scuola Superiore Sant'Anna of Pisa (Italy) with the evolution of the "Master in Management of Innovation" into the new "Master in Management, Innovation and Service Engineering" (MAINS).
