[Mathematical Modelling Education in East and West](#) May 06 2020 This book documents ongoing research and theorizing in the sub-field of mathematics education devoted to the teaching and learning of mathematical modelling and applications. Mathematical modelling provides a way of conceiving and resolving problems in people's everyday lives as well as sophisticated new problems for society at large. Mathematical tradition in China that emphasizes algorithm and computation has now seen a renaissance in mathematical modelling and applications where China has made significant progress with its economy, science and technology. In recent decades, teaching and learning of mathematical modelling as well as contests in mathematical modelling have been flourishing at different levels of education in China. Today, teachers and researchers in China become keener to learn from their colleagues from Western countries and other parts of the world in research and teaching of mathematical modelling and applications. The book provides a dialogue and communication between colleagues from across the globe with new impetus and resources for mathematical modelling education and its research in both West and East with new ideas on modelling teaching and practices, inside and outside classrooms. All authors of this book are members of the International Community of Teachers of Mathematical Modelling and Applications (ICTMA), the peak research body into researching the teaching, assessing and learning of mathematical modelling at all levels of education from the early years to tertiary education as well as in the workplace. The book is of interest to researchers, mathematics educators, teacher educators, education administrators, policy writers, curriculum developers, professional developers, in-service teachers and pre-service teachers including those interested in mathematical literacy.

[Teaching With Text-Based Questions](#) Jul 28 2019 Help your students navigate complex texts in history/social studies and English language arts! [The Impact of an Anti-Bullying Program on the Prevalence of Bullying in Junior and Senior High School](#) Jun 06 2020 Scope of Study: This dissertation examines the impact of an anti-bullying program on the prevalence of bullying in junior and senior high school. Three research questions were posed: Will an anti-bullying program reduce the prevalence of bullying in Junior (Grades 7-9) and Senior High (Grades 10-12) school? Will the program be more effective at the Junior or Senior High school level? Are there gender issues related to the effectiveness of the program (i.e., do males or females benefit more from the implementation of the program)? Findings and Conclusions: Data collected and analyzed to address the above questions suggest that the anti-bullying program was ineffective in reducing the prevalence of bullying at the junior and senior high school level. The treatment group at St. Bernard's School did not show any statistically significant changes when compared to the control group at Jacques Fontaine School. When grade was analyzed in the treatment group as a factor on the impact of the program, in all but one of the questions examined, there was little in the way of statistical significance to report. In the one question where significance was observed, students at the grade 10-12 level reported a lower level of bullying than their grade 7-9 counterparts. In addition, when gender was examined in the treatment group as a factor on the impact of the anti-bullying program, no statistical significance was observed. Thus, it would appear the anti-bullying program chosen for this study was ineffective in reducing the prevalence of bullying in junior and senior high school students.

**Rebuilding the Natural Environment, Grade 10** Sep 29 2019 What if you could challenge your tenth graders to think about how innovation can make the world a better place for humans, while finding ways to sustain progress and conserve resources? With this volume in the STEM Road Map Curriculum Series, you can! Rebuilding the Natural Environment outlines a journey that will steer your students toward authentic problem solving while grounding them in integrated STEM disciplines. Like the other volumes in the series, this book is designed to meet the growing need to infuse real-world learning into K-12 classrooms. This interdisciplinary, four-lesson module uses project- and problem-based learning to help students connect their existing knowledge about energy production and its effects on the natural environment to create innovations in renewable sources of energy based on research evidence. Working in teams, students will design an innovative way to meet society's energy needs and develop a pitch to market their innovation, focusing on how the innovation will optimize human experiences while being mindful of the natural environment. To support this goal, students will do the following: • Understand several forms of renewable, sustainable energy sources. • Apply their understanding of how alternators are used to generate electricity in lab experiments, as well as explain how tools such as windmills and dams are used to operate them. • Describe how electricity is generated in photovoltaic cells. • Calculate the amount of electricity consumed by several household items and consider this consumption when determining the average monthly energy consumption of households around the world in comparison to U.S. households. • Understand how fossil fuels have been used in the production of electricity and the impact they have had on the world's economy, humans' quality of life, and the earth. • Identify several hindrances to the creation of new energy sources as well as ideas to counter them. • List several factors that can be used to motivate people from all walks of life to use renewable and sustainable energies. • Create a fictional company that uses renewable energies. The STEM Road Map Curriculum Series is anchored in the Next Generation Science Standards, the Common Core State Standards, and the Framework for 21st Century Learning. In-depth and flexible, Rebuilding the Natural Environment can be used as a whole unit or in part to meet the needs of districts, schools, and teachers who are charting a course toward an integrated STEM approach.

**Developing Core Literacy Proficiencies, Grade 10** Feb 12 2021 The Developing Core Literacy Proficiencies program is an integrated set of English Language Arts/Literacy units spanning grades 6-12 that provide student-centered instruction on a set of literacy proficiencies at the heart of the Common Core State Standards (CCSS). Reading Closely for Textual Details Making Evidence-Based Claims Making Evidence-Based Claims about Literary Technique (Grades 9-12) Researching to Deepen Understanding Building Evidence-Based Arguments The program approaches literacy through the development of knowledge, literacy skills, and academic habits. Throughout the activities, students develop their literacy along these three paths in an integrated, engaging, and empowering way. Knowledge: The texts and topics students encounter in the program have been carefully selected to expose them to rich and varied ideas and perspectives of cultural significance. These texts not only equip students with key ideas for participating knowledgeably in the important discussions of our time, but also contain the complexity of expression necessary for developing college- and career-ready literacy skills. Literacy Skills: The program articulates and targets instruction and assessment on twenty CCSS-aligned literacy skills ranging from "making inferences" to "reflecting critically." Students focus on this set of twenty skills throughout the year and program, continually applying them in new and more sophisticated ways. Academic Habits: The program articulates twelve academic habits for students to develop, apply, and extend as they progress through the sequence of instruction. Instructional notes allow teachers to introduce and discuss academic habits such as "preparing" and "completing tasks" that are essential to students' success in the classroom. The program materials include a comprehensive set of instructional sequences, teacher notes, handouts, assessments, rubrics, and graphic organizers designed to support students with a diversity of educational experiences and needs. The integrated assessment system, centered around the literacy skills and academic habits, allows for the coherent evaluation of student literacy development over the course of the year and vertically across all grade levels.

**Plastic** Apr 04 2020 "This eloquent, elegant book thoughtfully plumbs the . . . consequences of our dependence on plastics" (The Boston Globe, A Best Nonfiction Book of 2011). From pacemakers to disposable bags, plastic built the modern world. But a century into our love affair, we're starting to realize it's not such a healthy relationship. As journalist Susan Freinkel points out in this eye-opening book, we're at a crisis point. Plastics draw on dwindling fossil fuels, leach harmful chemicals, litter landscapes, and destroy marine life. We're drowning in the stuff, and we need to start making some hard choices. Freinkel tells her story through eight familiar plastic objects: a comb, a chair, a Frisbee, an IV bag, a disposable lighter, a grocery bag, a soda bottle, and a credit card. With a blend of lively anecdotes and analysis, she sifts through scientific studies and economic data, reporting from China and across the United States to assess the real impact of plastic on our lives. Her conclusion is severe, but not without hope. Plastic points the way toward a new creative partnership with the material we love, hate, and can't seem to live without. "When you write about something so ubiquitous as plastic, you must be prepared to write in several modes, and Freinkel rises to this task. . . . She manages to render the most dull chemical reaction into vigorous, breathless sentences." -SF Gate "Freinkel's smart, well-written analysis of this love-hate relationship is likely to make plastic lovers take pause, plastic haters reluctantly realize its value, and all of us understand the importance of individual action, political will, and technological innovation in weaning us off our addiction to synthetics." -Publishers Weekly "A compulsively interesting story. Buy it (with cash)." -Bill McKibben, author of The End of Nature "What a great read-rigorous, smart, inspiring, and as seductive as plastic itself." -Karin Rashid, designer

**Students' Accuracy in Written English Under the Impression of the new "G8" System - a Case Study Feb 01 2020** Inhaltsangabe: Introduction: In Germany, education matters lie within the scope of each of the 16 German federal states. Consequently, there is no unique educational system which is valid for the entire Federal Republic of Germany, but 16 individual ones. However, a German-wide basic framework, including regulations about the compulsory school attendance for instance, does exist. The duration of compulsory schooling until passing the Abitur at the Gymnasium, however, is not regulated by this framework, but belongs to the power of decision of each federal state. For instance, in Thuringia and Saxony, the duration of compulsory schooling at the Gymnasium has been limited to eight years, as it was already the case before the reunification of Germany in 1990. In the other federal states, like North-Rhine Westphalia for example, the duration of compulsory schooling at the Gymnasium included an additional ninth year, resulting in the fact that the students attended the Gymnasium from grade 5 until grade 13. Nevertheless, in 2001, the ministry of education of the federal state Saarland decided for a reduction of the duration of compulsory schooling at the Gymnasium by one year. By now, all the other federal states have followed and therefore also made the decision for a reduced duration of only eight years at the Gymnasium. After many heated discussions, also the North-Rhine Westphalian ministry of education decided for a reduction of the duration of compulsory schooling at the Gymnasium. As a consequence of this decision, students of two grades (G8 and G9 students) entered the upper secondary level at all North-Rhine Westphalian Gymnasien on August 31st, 2010 (Ministerium für Schule und Weiterbildung des Landes Nordrhein-Westfalen, n.d.a). The students of this so-called Doppeljahrgang will all graduate in 2013 and therefore all of them will have to pass the same Abitur exams. Hence, it must be guaranteed that G8 students have the same preconditions as G9 students, despite having one year less of general schooling before graduating. Since no students have entered the upper secondary level after only five years at the Gymnasium in North-Rhine Westphalia before 2010, empirical research in this area is hardly available by now. Nevertheless, this Doppeljahrgang offers the unique chance of directly comparing G8 and G9 students in order to find out in how far the new G8 system was implemented successfully or not. Especially in the context of learning [...]
