Project Planning and Management for Ecological Restoration Mar 02 2020 Concern over climate change and the ongoing challenges of managing degraded ecosystems have made the field of ecological restoration a growing focus in the agendas of national and international conservation organizations, including the United Nations. The problems facing us are both complex and urgent, and effective solutions are needed. Project Planning and Management for Ecological Restoration presents principles of sound planning and management that will greatly increase the likelihood that completed projects will meet stakeholder expectations. John Rieger, John Stanley, and Ray Traynor have been involved in restoration activities for over thirty years and were part of the small group of restorationists who recognized the need for a professional organization and in 1987 founded the Society for Ecological Restoration. This book comes out of their experiences practicing restoration, conducting research, and developing and refining new techniques and methods. In the book, the authors describe a process for planning and managing an ecological restoration project using a simple, four-faceted approach: planning, design, implementation, and aftercare. Throughout, the authors show how to incorporate principles of

landscape ecology, hydrology, soil science, wildlife biology, genetics, and other scientific disciplines into project design and implementation. Illustrations, checklists, and tables are included to help practitioners recognize and avoid potential problems that may arise. Project Planning and Management for Ecological Restoration provides a straightforward framework for developing and carrying out an ecological restoration project that has the highest potential for success. Professional and volunteer practitioners, land managers, and property owners can apply these guidelines to the wide variety of conditions and locations where restoration is needed. Long overdue, this book will inform and advance the effective practice of this rapidly expanding field. Strategic Planning and Management Nov 02 2022 This book explains why organizations that want to succeed, and continue to succeed, need to engage in the proper kind of planning. The emphasis, nowadays, is on multipurpose activities, optimum use of resources, environmental approach, minimum use of energy. This book tries to integrate all of these, by showing the links between the different components of infrastructure and trying to model them. A well articulated, socially attractive and desirable project may fail during the implementation or operation stage, not only from bad design, but also due to inadequate attention paid to the human aspects required for its operation. This book is intended for graduates and practising professionals who are involved in the general development planning of their country/region. Management Planning for Cultural Heritage Jul 26 2019 Management Planning for Cultural Heritage challenges traditional perceptions of and about the heritage planning process while also presenting a comprehensive analysis of the ever-widening field of Cultural Heritage Conservation. Drawing on the authors' experience in teaching and involvement in international practice, the book examines the changes that are taking place in modes of thinking about heritage as part of increasingly complex urban transformations, and considers how these must engage with, and inform, professional practice. The book also acknowledges that international best practice has developed a great deal over the last 40 years and needs to be adapted, applied and refined through the recognition and application of regional values – tangible and intangible – based on cultural attitudes and practices. Emphasising the critical role of heritage planning and

management in guiding change, Taylor and Verdini argue that this is especially critical if we are to safeguard values, identity and significance. In this sense, heritage is understood not only as a technical process but also as a social construct. The book therefore promotes a people-centred approach to cultural heritage management. *Management Planning for Cultural Heritage* will be of interest to students, scholars and practitioners working in heritage studies and conservation. While the text has professional application, it also sets out to present a sound theoretical foundation relevant to the body of knowledge associated with management of cultural heritage places.

Planning, Development and Management of Sustainable Cities Apr 14 2021 The concept of 'sustainable urban development' has been pushed to the forefront of policymaking and politics as the world wakes up to the impacts of climate change and the destructive effects of the Anthropocene. Climate change has emerged to be one of the biggest challenges faced by our planet today, threatening both built and natural systems with long-term consequences, which may be irreversible. While there is a vast body of literature on sustainability and sustainable urban development, there is currently limited focus on how to cohesively bring together the vital issues of the planning, development, and management of sustainable cities. Moreover, it has been widely stated that current practices and lifestyles cannot continue if we are to leave a healthy living planet to not only the next generation, but also to the generations beyond. The current global school strikes for climate action (known as Fridays for Future) evidences this. The book advocates the view that the focus needs to rest on ways in which our cities and industries can become green enough to avoid urban ecocide. This book fills a gap in the literature by bringing together issues related to the planning, development, and management of cities and focusing on a triple-bottom-line approach to sustainability.

Event Portfolio Planning and Management Sep 07 2020 Cities and regions around the world increasingly capitalize on a series of events aimed at optimizing their reach and outcomes. How then can a series of different events be developed and harnessed? What are the conditions and the means by which synergies and collaboration among different events and their stakeholders can be fostered? This book for the first time explores how managers and host communities can synergize sport, cultural and other planned events in a portfolio in order to attain, magnify and sustain their outcomes. The incorporation of different events into a portfolio requires an integrative way of viewing the different community purposes that they serve in unison. This book elaborates on this holistic approach by developing an integrative theoretical framework for conceptualizing event portfolios, and examining their challenges and prospects as well as potential as tools for sustainable development. It therefore presents the foundations of event portfolio planning, the patterns of inter-organizational relationships within collaborative events networks that foster the conditions for community capacity-building and the requirements for the design and development of event portfolios. Topics are considered from varying perspectives and examples of emerging event portfolios from a range of geographical regions are integrated throughout.
